Background: Indonesia has abundant natural resources, including gold, nickel, oil, gas, coal, copper, aluminum, fresh water, marine products, plantations, livestock, and air. These natural resources certainly have great potential to improve the welfare of society, but in fact, many Indonesians still have low incomes, are poor and destitute, unemployed, buskers, beggars, pickpockets, muggers, and even robbers. All of these types of people and social behaviors are born from economic inadequacy and low levels of education.

Purpose: This study aims to determine the efforts that can be made to realize a prosperous Indonesia.

Methodology: This research is a normative research with a statutory regulatory approach related to the research object, the theory used is the welfare state.

Finding: The research results show that efforts to realize a prosperous Indonesia include: Providing Quality Education, Mastery of Science and Technology, Responsible and Sustainable Natural Resource Management, and Good Law Enforcement Instruments.

Limitation: This research generally concerns the national economy, but specifically this research examines the national economy using a welfare state approach that is based on law.

Originality: Efforts to Realize a Prosperous Indonesia is an original work resulting from my own thoughts and research, not the result of artificial intelligence/AI, plagiarism, and has never been published or presented at a seminar elsewhere.

Keywords: efforts, prosperity, Indonesia
